DQE Offers New Hospital Command Center Training

FISHERS, INDIANA – February 18, 2010/PRESS RELEASE – The DQE Training Division is offering a new program to help hospitals better prepare for emergency and disaster events. The **Hospital Command Center (HCC)** onsite training course is an advanced level Hospital Incident Command System (HICS) training held at the client's hospital. This offering is one of the first available advanced HICS training courses that gives participants an in-depth understanding of the role of the hospital command center during a disaster.

The HCC training combines lecture, equipment demonstration, and tabletop exercises to prepare an incident management team to function effectively in a command center. The training focuses on ensuring that the hospital's incident management team understands how to work efficiently and effectively in an environment that operates differently from their normal management activities.

HCC training is the latest training offering from DQE, who also provides other onsite training courses including HICS for Healthcare Managers and Hospital-based Decontamination, as well as DQE-on-Demand® Online training for HICS, Hospital-based Decontamination, and Hospital Evacuation.

About DQE

Since 1990, DQE has supplied healthcare facilities with the training, equipment, planning, and support to manage all-hazard events. Over 500 hospitals and 14,000 healthcare workers have come to trust DQE for consistent disaster preparedness. Headquartered in Fishers, Indiana, DQE proudly celebrates 20 years of service.
