Defend Against H1N1 with StatPaq™

INDIANAPOLIS - October 16, 2009/PRESS RELEASE/ This flu season the healthcare community is diligently combating the spread of the H1N1 virus. According to the guidance on infection control measures by the CDC, personal protective equipment is the “last line of defense for individuals against hazards that cannot otherwise be eliminated or controlled.” In many healthcare facilities standard precaution supplies are not easily accessible and may be inconsistently used. The CDC states that “PPE is effective only if used throughout potential exposure periods.” Having StatPaq Standard Precaution Kits readily available promotes consistent use, which provides protection for healthcare providers and their patients.

The StatPaq contains all the items needed for standard precautions in one package. Each individually wrapped StatPaq includes:

- ◀ One barrier protective gown
- ◀ Nitrile gloves (2 sizes)
- ◀ Shoe covers
- ◀ N95 particulate mask
- ◀ Protective eyewear

StatPaq Standard Precaution Kits are ideal for any patient care setting, including hospitals, clinics, private physician practices, and in the field for emergency responders. Free StatPaq samples are available by visiting <http://www.dqeready.com/statpaq>, or calling 1-800-355-4628.
